

Profi Sealing Compound Rapid PSM 1K

- > quick hardening
- > very efficient
- > open to vapour diffusion
- > single component
- > can be applied by trowel and spread

Product description

Quick hardening, highly efficient, hydraulically setting, solvent-free, water-impermeable, but still water vapour permeable, flexible single-component sealing slurry for the creation of seamless and jointless compound seals for the wall and floor area of indoor and outdoor areas, for jointless sealing of wall and floor area directly under the ceramic covering. For application on balconies, terraces and swimming pools (down to 4 m) as well as underfloor heating systems. Tiling is possible after three hours. According to EN 14891, ÖNORM B 3407 W1-W6, according to DIN 18534 for water impact class W0-I to W3-I (for W3-I without additional chemical load), according to DIN 18531-5 (balconies, loggias, etc.) and DIN 18535 (swimming pools and containers), as well as according to the test principles for the issue of a general building inspection test certificate.

Delivery format

Container	Outer packaging	Pallet
18 KG / PS	-	48 PS

Storage

Can be stored frost-free, cool, and dry on wooden shelves in the unopened original container for 730 days

Processing

Recommended tools

slow-rotating electric mixer, toothed trowel (6 mm)

Mixing

Add the powder to water using a slow-rotating mixer until a homogeneous and lump-free blend is obtained (mixing time approx. 3 minutes).

Processing

Completely apply the correctly mixed mass in even layer thicknesses via a smoothing trowel. A suitable Murexin sealing tape, including the system components, must be laid for adjoining walls and floors. In the areas of pipe outlets and water drains, it is recommended to incorporate Murexin sealing collars. The sealing layer is to be created in two separate steps. Clean the tools with water after use.

Technical data

μ value	approx. 400
Colour	grey
Consumption	approx. 1.15 kg/m ² per mm layer thickness (approx. 2.3 kg/m ² per 2mm layer thickness)
Processing time	approx. 50 min.
Drying time	1st layer approx. 1 hr.
Ready for laying	after approx. 3 hrs
Water Consumption for trowelable consistency	approx. 5.0 l / 18 kg
Water consumption for rollable consistency	approx. 5.6 l / 18 kg
Layer thickness Austria ÖNORM B 3407 W1 – W4	min. 1.5 mm and max. 4 mm
Layer thickness according to Austrian standard ÖNORM B 3407 (W5–W6), German standard DIN 18534-3 (W1–W3), and other countries	min. 2 mm and max. 4 mm (All values refer to application in 2 layers)

Test certificates

Tested in accordance with (standard, classification ...)

ÖNORM B 3407

DIN 18534

DIN 18531-5

DIN 18535

EN 14891

GEV-Emicode

Substrate

Suitable substrates

Concrete

Cement screed

Anhydrite screed

Mastic asphalt

Plaster

Lime-cement plaster

Tile laying technology

Masonry
Gypsum plasterboards,
smooth concrete,
aerated concrete
Wooden substrates

The substrate must be dry, frost-free, solid, weight-bearing, dimensionally stable, free of dust, dirt, oil, grease, release agents and loose parts, and it must comply with the applicable technical national and European directives, standards and "generally accepted rules of the trade".

Product and processing instructions

Material instructions:

- The material properties may change significantly when working outside the ideal temperature and/or humidity range.
- Temper materials accordingly before processing!
- To retain the product properties, no foreign materials may be mixed in!
- Water dosing amounts or thinning specifications must be precisely kept!
- Check coloured products before use for colour consistency!
- Colour evenness can only be guaranteed within a batch.
- The colouring is significantly influenced by the environmental conditions.
- Mixed material which is already starting to stiffen may not be diluted further or mixed with fresh material!

Environmental information:

- Do not process at temperatures below + 5 °C!
- The ideal temperature range for material, substrate and air is +15 °C to +25 °C.
- The ideal relative air humidity range is between 40 % to 60 %.
- Increased humidity and/or lower temperatures delay, lower air humidity and/or higher temperatures accelerate drying, setting and hardening.
- Ensure adequate ventilation during the drying, reaction and hardening phase; avoid draughts!
- Protect from direct sunlight, wind and weather!
- Protect adjacent components!
- Before using seals, defects and uneven surface areas must be levelled in a separate step.

Tips:

- We recommend using a test surface first or a small area for initial, small-scale testing.
- Observe the product data sheets of all MUREXIN products used in the system.
- Keep a genuine original container of the respective batch for later repair work.
- Compound seals cannot replace structural sealing.
- The underfloor heating system may not be switched on during the processing and hardening.

The information provided reflects average values that were obtained under laboratory conditions. Due to the use of natural raw materials, the indicated values of individual deliveries may vary slightly without impacting the product suitability.

Safety instructions

This leaflet is based on extensive experience, is intended to convey the best of our knowledge, is not legally binding and does neither constitute a contractual legal relationship nor a subsidiary obligation resulting from the bill of sale. The quality of our materials is guaranteed within the framework of our general terms and conditions. Our products may be used by professionals and/or experienced and accordingly technically skilled persons only. Users are not released from inquiring in case of uncertainties or from rendering professional workmanship. We recommend using a test surface first or a small area for initial, small-scale testing. Naturally, it is not possible to describe or foresee all possible current and future uses and peculiarities. Information that is assumed to be familiar to experts has been omitted.

Please observe the current, technical, national and European standards, guidelines and data sheets regarding materials, substrates and the subsequent construction. Please contact us if you have any reservations or doubt.
